

November 29, 2017

When it was time to design a new website for my business, I did online research, of course! I narrowed it down to three companies and I emailed them all with my intent to have a new website designed. My goals were to have my website equal the professionalism of my competitor's website along with representing the uniqueness of my small business. I also wanted my website to be used as tool to help existing and potential customers get needed information and resources.

Sue Forde at *Dynamic Graphics Website Design, Hosting & Maintenance*, responded quickly to my inquiry and ask me a bunch of questions about my needs and wants. She promptly provided me with a detailed quote. And she answered all my questions, and I asked a lot of them.

The work began on my new website immediately after I accepted their proposal. Both Sue and Shauna worked diligently to turn my wants into reality. They were helpful, courteous and professional from beginning to end. My website is now something I am very proud of it is very organized, professional, and easy to navigate and it exceeded all my expectations. It now allows my customers and potential customers to get information about the products I sell, view helpful videos, get quotes, access to my blog, click links to apply for other services, and more. My website now has the potential to get more customers and gives my business a much-needed "professional" online presence.

I really appreciate Sue and Shauna's expertise and their continued support of my website needs. I highly recommend them for website design, hosting, and maintenance. They are great!
